

Vacuum Generator

A Reliable Vacuum with an Air Compressor

A low cost and reliable method of generating a vacuum for those who already have a good air compressor. The generator will create 27" of Hg vacuum/pressure when coupled in-line to an air compressor capable of producing 2.2 cfm. Larger air compressors are advisable for continuous use applications. Smaller air compressors should use the #2229-A Vacuum Generator. Suitable for parts up to 80 sq ft.

Product Features

- Low cost vacuum source
- Compact size easy to mount
- No moving parts/zero maintenance

Model Number	Maximum Vacuum (IN. HG)	Maximum Open Flow	Air Consumption @ Suggested Operating (30-75 psi) Pressure	Vacuum Port Size	Supply Air Port Size	Net Weight
